Cleaning procedure for Miller® Brand Belts, Harnesses and Web Lanyards

For customers who need to **spot clean** any Miller® brand belts, harnesses and webbing lanyards, Honeywell Safety Products recommends using a damp sponge or cloth along with a mild detergent.

For customers who require **completely washing** Miller® brand belts, harnesses and webbing lanyards in commercial washing machines, Honeywell Safety Products recommends the following procedure:

- Place products to be cleaned in mesh laundry bags to reduce the chances of abrasion, snagging and entanglement that could cause damage to stitching or labels.
- Wash in cold or warm water that does not exceed 135° F.
- Use a **mild** soap or detergent that does not include bleach.
- Wash on a regular wash and rinse cycle.
- Remove items from mesh bags and hang freely to dry but away from excessive heat, steam, or long periods of direct sunlight. **Do not machine dry!**
- Inspect products thoroughly before returning to service.

Note: Machine washing may cause fading and softening of the webbing and may reduce the useful service life of the product. Be sure to inspect your washed products thoroughly before use.
